Another thing I like about Photoshop is that the toolbars are well designed to improve productivity. If you use the Document Outliner, you can view and edit objects in too many ways for a human to keep up with them all. The Lightroom Info panel provides what will net you the most productivity gains. In the Photoshop Info panel, it is just as easy to open the Layers palette, manage layers, or add a new adjustment layer as it is to do it in the Lightroom Info panel. The Photoshop Layers palette is also very easy to use. In the same way nearly everything in Photoshop is designed to quickly and easily get you to your desired effect, so it is in the toolbox. Albums and Smart Albums make it easy to arrange and rename images. Additional toolboxes and palettes make it easy to work in ways that are not always especially efficient. Some workflows are speedy, others start slower. Some make money, the others make you. Some provide input to others; others ask for interaction. A new toolset with a new name, a group of concepts that cross disciplines, and a bigger, cheaper Object Explorer make working with images you can return to and find almost anything with different tools. It can make a mundane task faster or a complicated task easier. New features to better integrate Photoshop and Lightroom make getting work done faster and less frustrating. The method for bringing Lightroom and Photoshop together has been the Lightroom Image Browser. A hundred thousand were done with it and then it was introduced to Photoshop's Library. Now, it's back, but in a new, kinder, gentler way.

Photoshop already has a very large library of filters, but with the introduction of the Adobe Radius feature, people have new options for making lens-like effects. This is yet another tool that you can find in Photoshop Creative Cloud. This feature lets you blend two images together to produce an effect much like a traditional photographic lens. Overlay types include Sketch, Soft Light and Pure Light. The new Tools panel in Photoshop CC allows for a free-form environment with easy integration of your favorite add-ons. While there are many Photoshop plug-ins, you can easily find tools that you need to transform your images into amazing ones. As you'll see in the chapters that follow, Photoshop offers a great amount of flexibility. Photoshop also introduces the ability to preview your work while you're modifying a file — including eye droppers and hues — and there's photo-editing software for the iPad. The main reason is that the new Smart Preview Panel improves the overall experience of editing images and graphics. Adobe Photoshop already had a large tool palette, but the introduction of Adobe Bridge extended it even further with the addition of the Update panel. This allows users to see the updates made to their files, as well as to make copies to their hard drive. It doesn't get much easier to produce an interactive presentation than with the introduction of the new Animatable shape tool. Adobe Presenter is a nice app for making dynamic presentations. You can even press a button to hang the presentation. This lets you share, embed or personally present, especially in a web gallery.

As AI-powered projects take over more of our lives, and tools continue to become smarter and more intuitive, users explore the possibilities and are more willing to experiment. There is a natural progression, rather than a sudden rush to the edges, as AI makes us more comfortable with not knowing. With the future of AI has already become a term used in many industries, it's only a matter of time before applications that are as intelligent as humans are installed in our homes, without rest. Once it made those features not only accessible, but made them so compelling that people were willing to pay to work in Photoshop and other big name applications. Adobe has even taken it a step further. It has announced the application of big data to scrutinize a user's photographs. Like Google Suggest, it was able to detect and retrieve similar faces on social media and elsewhere. They were able to tell your friends, "Hey, I think you look like this person or this outline." It then suggests an outline template that you can choose or even run a program to create and trace. Meanwhile, on Google, we are trying to do the same thing. But it is more complex, as it will have a variety of effects and finish the process, unlike Photoshop elements. The big names just can't follow their competitors. They want to be first. However, competition is still intense in the AI space, and it is a tight race: Most companies agree that at any given time, only one AI will run the show. This is a huge win for Adobe in terms of naming rights and any other generic brand recognition, but it is a game they may grow tired of in time. Once AI gets any deeper into the sector, the number of divisions will certainly increase exponentially.
