Nice review but after upgrading to LR5.2 RC I think performance is better than with LR4.

Working on a project with 1500 D800 NEFs my impression is that the smart previews increase speed while working in the Developer mode - in Lib. mode however everything slows because the JPEG previews are used. I like to be able to quickly edit a JPEG file in Photoshop but I have to wait several seconds for an image to load onto the screen. I would probably have to purchase ten or more copies of Photoshop for the people I work with. My question is: Is there any way to edit JPEG files quickly on the iPad Pro.

Regards

Eric I wanted to test this app on iPad but didn't get it on my iPad 6+ machine, but I do have an iPad Pro.

It is wonderful on that. I am able to touch a photo and make an instant selection and then quickly edit color and contrast.

and then to save it back.

This is an amazing app.

I will definitely be getting more of it.

Keep up the good work.

The idea of running software as complex as Photoshop directly in the browser would have been hard to imagine just a few years ago. However, by using various new web technologies, Adobe has now brought a public beta of Photoshop to the web. Today, I'm going to show you how to use the Adobe Photoshop Gradient plugin for Mac. The plugin can be downloaded for free for both macOS and Windows. PNG, WEBP, GIF, and SVG are supported file types. You can use the Gradient tool to make beautiful photo effects, including gradient fills and ripples. To create a new gradient, open the Gradient tool, set up a gradient using the Cheatsheet, and choose a color along the gradient. Then, click the Gradient tool. This opens the Gradient options right where you painted your gradient. I hope you enjoyed this tutorial.
